Re: Air Quality Authority to Construct Permit #0953-M2

Dear Mr. Troutman,

I just learned that the University of New Mexico Hospital proposes changing its air quality permit to allow for greater emissions from new boilers and generators. As a resident of Albuquerque and someone who enjoys using the North UNM Golf Course for recreation and exercise, I am very concerned about the potential of our air quality diminishing. This may harm me directly. Clean air protects the health and well-being of our entire community. If UNM is proposing to emit more pollutants, what is its plan to off-set these changes? I respectfully request a public hearing in order to understand these proposed changes more completely.

Thank you very much,
